

Quality Ambition and scale

Quality assurance has a high priority at SP Moulding. It's necessary for production of injection moulded precision components to fulfil national and international customers requirements.

Certification

SP Moulding is certified according to DS/EN ISO 9001:2008 and DS/EN ISO 14001:2004. Our quality procedures and behaviour guarantee process certainty and documented quality. SP Medical is certified according to DS/EN ISO 9001:2008 and DS/EN ISO 13485:2003 and have clean room production.

Qualified employees

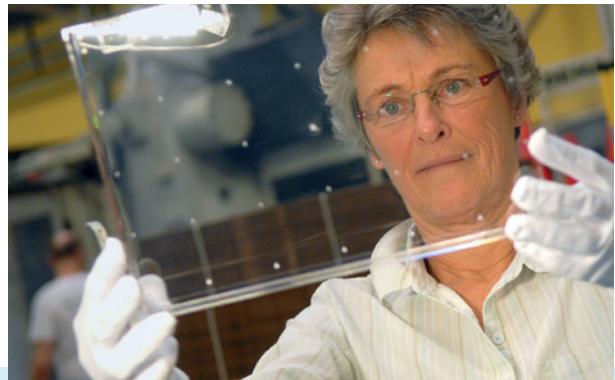

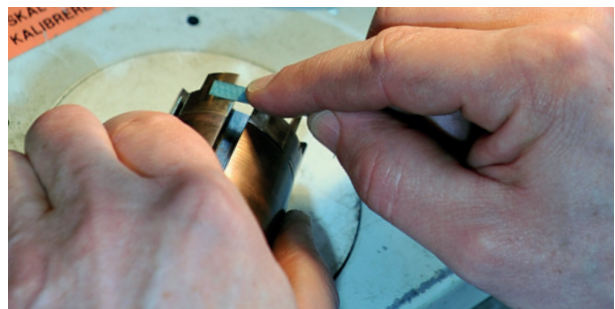

In addition to SP Mouldings quality procedures quality assurance asset is our qualified employees. Their careful operation of the high-tech production facilities contributes greatly to ensuring our position as the leading partner among European system suppliers of plastics injection moulding.

Test and measuring equipment

SP Moulding has a wide range of test and measuring equipment.

- 3D optical and tactile measuring machine.
- 2D optical measuring machine.
- Measuring microscope.
- Profile projector.
- Pull/push tester.
- Hardness tester, Shore A.

SP Moulding A/S takes the position as Denmark's leading subcontractor of injection moulded precision components in plastics. Our task solutions range from design, construction and tool production to workpiece manufacture, and our customer list comprises a wide selection of the leading players of the industrial sector. We have more than 300 injection moulding machines at our disposal with clamping forces ranging from 25 to 1,250 tonnes. Several of these are multi-component machines and machines with air-mould equipment.

SP Moulding A/S forms part of the international and listed SP Group A/S comprising a wide range of companies in Denmark, Germany, Poland, Netherlands, Sweden, Canada, USA, Brazil and China. In addition to injection moulding, the Group offers vacuum forming, polyurethane moulding and various forms of surface coatings with for example Teflon and scratch-proof lacquers.
